# FINAL LOGO

RURAL TECHNOLOGY ACTION GROUP

RURAL TECHNOLOGY ACTION GROUP

# DESIGN PHILOSOPHY AND REASONING

I believe that the respected Government of India already has a design language throughout its official logos, many of which contain a seal. I wished to not interfere, but rather incorporate meaningful imagery associated with the rural India in the already glorious framework.

The adorned logo represents a **hand helping to plant a seed**. India still stands as a largely agricultural nation, 54% of Indian land is dedicated to agriculture and Indian Villages are defined by their rich roots in it. The hand reaches in from outside the periphery of the imagery, representing a help that the current scenario lacks.

The imagery of the logo contains a **trowel and wheat**, allegorical to the roots of RuTAG as it aims to help the rural areas. The aid is technological, and the gear is a symbol of ever growing technological advancements. **The gear also contains 24 teeth, a representation of the 24 spokes present in the Ashok Chakra.** RuTAG operates in coordination of **7 IITs.** The IITs are world renowned for their excellency in education and research, and the book in the background is a symbol of the very same.

*The banner on which the name of the establishment resides is partly inspired by the logo of my alma mater, IISc Bangalore.*

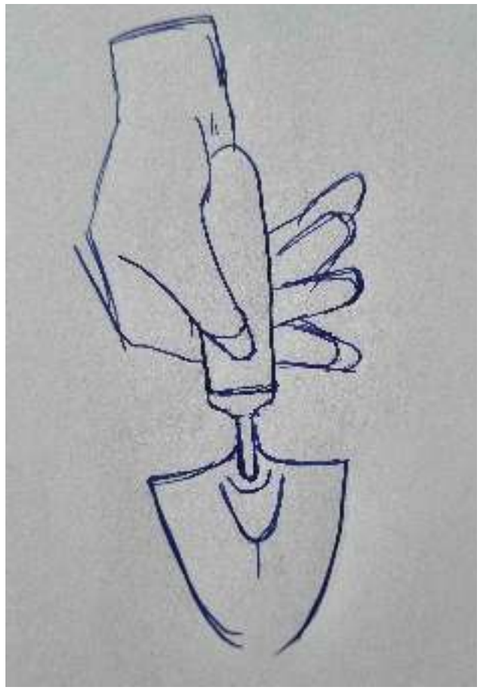

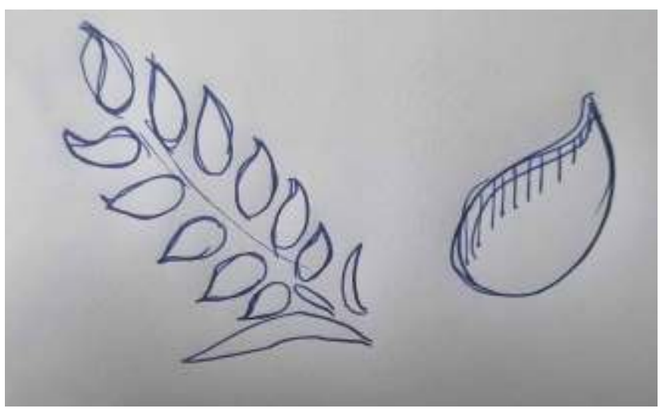

# DESIGN METHODOLOGY

The work was largely done in figma using vector shapes, as I needed the image to be infinitely scalable. The wheat is one of the examples of elements drawn using vectors.

A lot of the vectorization of drawn elements was done in Adobe Illustrator, as it provides specialized tools for such. Image trace was a feature often used, primarily for the hand for it is the major drawn element in the logo. The logo was hand drawn, brought to Illustrator and then converted into a vector image. I had to adjust the stroke weights to obtain the desired results.

The font used for the name of the establishment is Baskerville Old Face, a serif font from the transitioning period. The font was used widely in books around late 19th century, and my use was influenced by my love for books and vintage design.

# THANK YOU
